RE: LEED Compliance, Recycled Content

Dear Valued Customer,

PT Atlas Manufacturing purchases raw materials from a variety of sources, both domestic and non-domestic, to support the production of steel wedges at our manufacturing facility. All steel used in the production of our wedges, regardless of the raw material supplier, will contain a total recycled content of between 95% - 98%.

There are several foundries, both domestic and non-domestic, which are licensed to manufacture Atlas' cast anchorages (AN5M and AN5S). Those foundries are EBAA Iron Inc., Columbus Foundry, Grede Foundries Inc., and JDH Pacific Inc. Regardless of which foundry supplies the casting, all Atlas anchorages will contain a minimum of 90% post-industrial recycled steel scrap recycle.

With Kind Regards,

Blair Mathews

Blair Mathews
