January 1, 2020

Dear Customer,

Per the PTI M-10 specification and the CRT-20 plant certification standard, many customers have requested information from us to ensure the resin we use in producing our encapsulated anchor system complies with the updated UV protection guidelines.

The Atlas encapsulated anchorages and components are produced with resin that is performance rated to UV15, or up to 15,000 hours exposure in a xenon-arc weatherometer.

Please feel free to contact us with any questions or further requirements.

With Kind Regards,

Blair Mathews
